Inspections & Audits

Understand hazards and reduce risks with comprehensive lab inspections and real-time reporting, allowing you to **conduct audits with confidence while improving compliance and operational excellence**.

Get inspections done faster and increase productivity by over

20%

" No more sending manual reports! We do all inspections on iPads and can get more inspections done per quarter. We've reduced follow-up times too. When an inspection goes out, if things don't get completed, the system automatically triggers emails to follow up."

— Jennette P., Lab Safety Officer

Provide oversight and transparency of inspections

Holistic view helps identify trends and aids in risk mitigation

- Reduce biases related to inspections with real-time dashboards of inspections and self-inspections that report findings and trends.

- View frequent findings, outstanding inspections, inspection history, activity trends, and more, at the organizational, departmental, and group-specific level.

- Provide focus to manual process follow-up or individual report reviews. Teams can spend more time impacting safety and building rapport where needed.

- Full transparency into inspection scheduling ensures teams are prepared in advance for their next inspection or audit.

- Easily attach documents and photos to inspection reports for clear communication and accountability.

Drive compliance and operational excellence

Manage pre- and post-inspection process, ensuring compliance and productivity

- Submit inspections and audits digitally, and accurately, without bias through online forms.

- Allow for any discipline to build their own inspection checklist with findings and corrective actions that can be reused, ensuring continuity between inspectors.

- Gain insights into inspection results to help make actionable decisions, such as identifying trends before they become a larger issue.

- Automated reminders assist with closing-out open inspections

- Monitor the status of individual findings and track all correspondence related to the inspection in one place, giving visibility to all team members.

- Build rapport with your organization's scientists and other group members by using inspection data to identify opportunities for training and/or process improvements to reduce risks.

Automate inspection process and frequency

Enhance communications and protect your people and reputation.

- Improve compliance and efficiency with flexible inspection frequency requirements for both self-inspections and oversight inspections.

- Set frequencies of inspections based on hazards, department, buildings, focus area, or even for individual groups. Inspection compliance automation triggers inspections based on a groups' risks, needs, and hazards profile.

- Configurable checklists allow teams to create a variety of inspection types that can be set to hazard or location-based requirements. Set the frequency of scheduled inspections to reduce administrative burden and ensure compliance.

- Protect your organization's reputation by tracking the resolution of inspection findings, and documenting solutions and corrective actions along with deficiencies.

- Email alerts remind key lab personnel about outstanding inspection report responses and can prompt escalation when reports are overdue. Reduce compliance gaps by scheduling automatic email communications between safety teams and the lab groups they serve. Receive automated reminders and confirmations associated to inspection related tasks, eliminating manual follow-up.

- See recently noted inspection findings for the group or space highlighted on the checklist, helping inspectors to zero in on frequent or recurring issues.

SciShield

Maintain safe, efficient, and compliant labs by automating your inspection process and frequency with real-time reporting.

UNIFIED PLATFORM			
Templated inspection checklists	✓	Resolution/response due dates	✓
Pre-populated inspection finding details	✓	Automated reminder emails	✓
Self-inspections	✓	Inspection queue and inspector assignment	✓
Automated inspection requirement dates	✓	Dashboards and reporting	✓
Inspection scoring options	✓	Recent issues highlighted on checklist	✓
Configurable finding severity ratings	✓	Two-way communication tracking	✓
Photo and document attachments	✓	Escalation options for non-compliance	✓
