

# Medical Surveillance

Support an effective Occupational Health & Safety Program that meets OSHA, CDC, NIH, and EPA requirements with Hazards-based medical surveillance that ensures **requirements are identified and tracked through completion and renewals.**

Reduce  
**over 80%** of time  
on common lab safety and  
operations tasks.

// *Using SciShield to manage the medical surveillance enrollment for the Animal Contact groups has increased productivity by 75%.* — James G., Executive Director, EHS

## Medical Surveillance Program

*Rapidly build out and oversee a targeted medical surveillance program.*

- Program Managers have full control to establish as many medical surveillance/occupational health services as desired in a system designed to support a broad range of requirements (e.g., respirator fit testing, vaccinations, declination forms, audiometric testing, etc.)
- Maintain medical surveillance program records security in one centralized system that connects to group, user, and space profiles to ensure program coverage.
- Control access to sensitive information to ensure privacy and confidentiality.

## Communications and Monitoring

*Mitigate risk with proactive communications to drive safety and compliance.*

- Automated reminders reduce administrative burden with targeted email notifications for upcoming and past-due medical surveillance requirements.
- Provide the appropriate visibility at the service level to medical surveillance requirement compliance based on roles including managers, EHS, Lab Operations, and more.

## 3<sup>rd</sup> Party Integrations

*Providing a framework to achieve 360° occupational health program coverage.*

- Effectively and efficiently connect EHS medical surveillance program to occupational medicine department systems (e.g., Enterprise Health).
- Integrates seamlessly with Training LMS module to simultaneously drive training requirements and deliver training courses that correspond to medical surveillance requirements.

## Medical Surveillance Requirements & Records

*Streamline medical surveillance requirements assignment (e.g., OSHA, CDC, NIH, EPA)*

- Create profiles to automate medical surveillance requirement assignments and workflows.
- Utilize built-in user-specific hazard identification to trigger medical surveillance requirements based on job-related exposures and responsibilities.
- Track, record, and report employees' occupational health requirements, records, and compliance status at program, service, group, and individual employee levels.

Maintain safe, efficient, and compliant labs with medical surveillance software you can trust.

HAZARD-BASED MEDICAL SURVEILLANCE			
Hazard-Driven Occupational Health Requirements	✓	Group-Level Compliance Reports	✓
Unlimited, Custom Medical Surveillance Service Types	✓	User Occupational Health Profiles	✓
Automated Reminders	✓	EHR Integration	✓
Compliance Records at program, service, group, and individual employee levels	✓	User Exemptions	✓
Strict Permission Controls	✓	Multi-Disciplinary Medical Surveillance	✓
