

Unified Platform

Unified platform integrates all modules for a simplified user experience. Connect scientists, Laboratory Operations, and EHS for **total transparency, decreasing total operational costs and reducing personal and organizational risk.**

Reduce over **80%** of time on common lab safety and operations tasks.

// The key to our success is the underlying management platform that critically weaves and undergirds the foundation of three core areas of any safety program: people, the things they do and the places they do them – this is done through smartly designed web-based technology.”
 -Shane S. | Senior Director | Risk & Safety

Eliminate siloed information with Unified Platform

Centralization of EHS & Lab Operations delivers efficiencies and operational oversight.

- Integrate all modules for a simplified user experience with a directory of people, spaces, hazards, and job activities enabling total transparency and comprehensive safety profiles.
- Permission-based management levels and access controls can be based on an individual's activities and level of responsibility or to the research group to which they are assigned.
- Manage your safety and compliance program in one easy-to-use system, while reducing total operational cost and personal And Organizational risk.
- Store all important safety and compliance documents related to projects in one centralized repository.

Streamline safety tasks and improve compliance

De-risk your organization and protect your people and reputation.

- Easily identify and assign hazards to groups, labs, spaces, and individuals to automate laborious tasks, reduce new employee onboarding time, create proper risk profiles, provide hazard-based communication, and identify appropriate training requirements.
- Improve compliance by using automated reminders and notifications to prompt users to take immediate action.
- Display crucial information and maximize safety in every lab with a [modern door sign](#) solution.

Communications and Monitoring

Mitigate risk with proactive communications to drive safety and compliance.

- Targeted email communications help EHS reach specific audiences based on hazards, locations, or individual requirements.
- Keep all communications centralized and organized, and related to project tasks and follow-ups, to ensure safety and compliance happens without manual efforts and disparate communication.
- Minimize risks and create transparency for safety observations with ObservNow, providing an easy and accessible method for any member of the organization to share observations of physical or behavioral hazards, near misses, or even positive remarks.

Gain actionable operational insights

Holistic transparency enables the identification of real-time trends.

- Configurable overview dashboards provide real-time reporting for areas of interest or concern.
- Instant access to critical information for emergency responders concerning locations, personnel, chemical inventories, biohazards, etc.
- Ensure compliance with real-time reporting across all modules with aggregated, actionable, and trusted data.

Security

Trusted security that safeguards your data..

- Have confidence that all your data is safe and secure, with industry leading security best practices/systems and continuous monitoring with 99.9% uptime guaranteed.
- SSO login with Active Directory for all user access, including the ability to establish roles and permissions
- Integrate through available APIs and existing partnerships to connect with SSO logins, user directories, learning management systems, and more.

Maintain safe, efficient, and compliant labs utilizing a unified platform

UNIFIED PLATFORM			
Directory of people, spaces, hazards, and job activities	✓	Document organization and storage	✓
Automated and templated messaging tools for targeted communications	✓	Permission-based management levels & access controls	✓
Safety Observation reporting tool	✓	Dashboards to aggregate and report data from across the organization	✓
Single Sign On (SSO) and directory integration	✓	Modern door sign solution	✓

Combining modules provides additional benefits to enhance your organizations EHS and Lab Ops goals of achieving safety, compliance, and operational excellence.

More time for research | Less administrative burden | Safety compliance with confidence
Contact us to learn more.

As a global leader in EHS and Lab Ops software, SciShield ensures a safe, efficient, and compliant laboratory environment. Founded, developed, and trusted by scientists, SciShield is committed to reducing administrative burden and complexity on scientists with extensible and rapidly deployed modular solutions – helping to *unleash innovation without compromise*.
